WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Windy and Very Dry East of the Cascade-Sierra Crest Monday-Wednesday ***

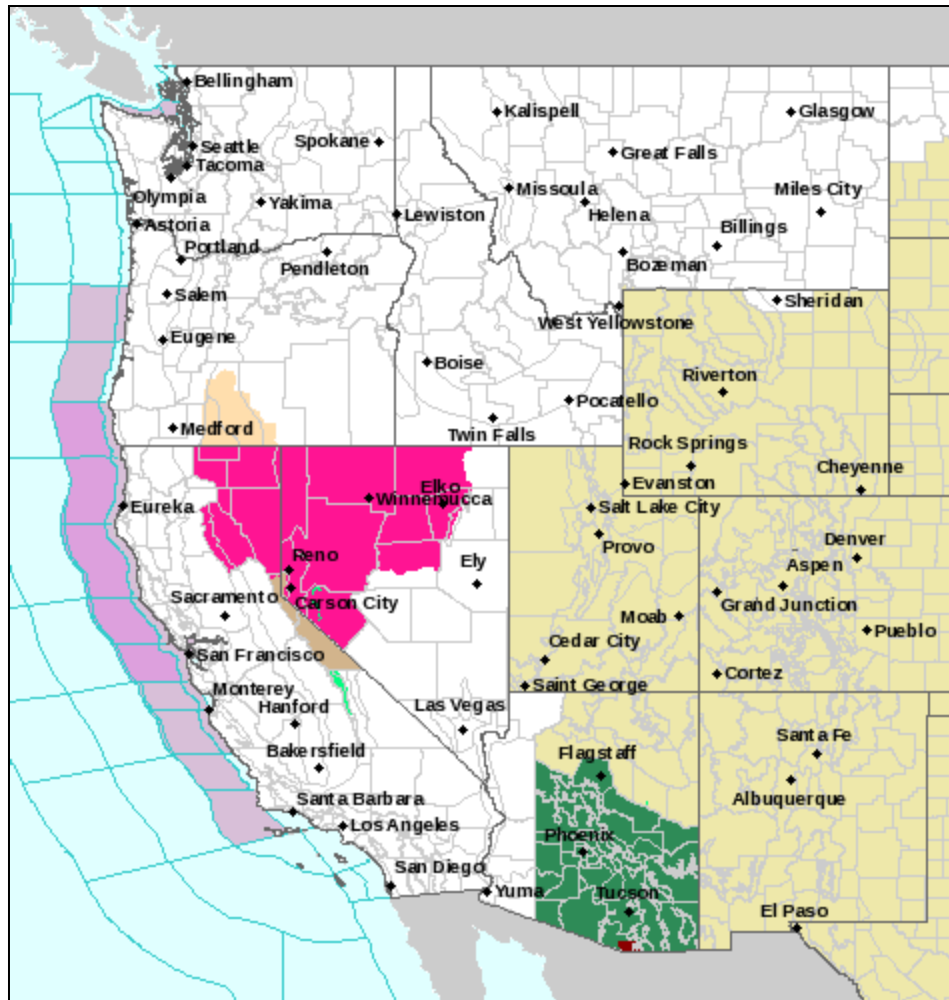

A dry southwest flow pattern aloft will set up as an offshore low pressure trough approaches the coast and the high continues to weaken. The trough will be over Northern California through midweek. Temperatures will drop to near normal and humidity will climb a bit Monday through Wednesday. The main affect from this trough will be southwest winds gusting to 25-35 mph and very low humidity east of the Cascade-Sierra crest on Monday through Wednesday. Late in the week the trough will weaken and high pressure will return with hotter temperatures.

SOUTHERN CALIFORNIA

*** Hot and dry through Monday ***

High pressure over the southwestern States will cause temperatures to remain 5 to 10 degrees above normal through Monday, with mid 80s to mid 90s across the mountains and mid 90s to 105 in the valleys. Minimum humidity will remain mainly between 12% and 25% away from the coastal areas through Monday. The high pressure will shift east bringing a little cooling to the area Tuesday through the end of this week, with 80s to low 90s across the mountains and 90s to 102 in the valleys. Minimum humidity will increase to 20% to 40% across Southern California Tuesday through the end of this week, but stay between 12% and 25% across Central California. Isolated afternoon showers and thunderstorms will form over the mountains and deserts of Southern California Tuesday through the end of this week. Westerly winds of 15 to 25 mph with gusts to 40 mph will continue to surface across the desert passes each afternoon and evening through the end of this week.
